Dormant Spray Cocktail

For Fruit Trees, Roses

*not for human consumption!

Recipe:

- 3 tablespoons Monterey® Liquicop
- 3 ounces Monterey® Take Down Garden Spray concentrate
- 3 tablespoons Monterey® Saf-T-Side®

Mix above ingredients with 1 gallon of water in a tank sprayer and follow label instructions. This recipe is not a substitute for label instructions. This is intended to be sprayed on dormant fruit trees and roses, not citrus or avocado trees.

We recommend to apply this “cocktail” up to 3 times during the dormant season. Ideally about Thanksgiving (as soon as the leaves have fallen), Christmas/New Years and last around Valentine’s Day. The last spraying needs to be before the flowers open.

Spray all parts of the tree until wet. As with any spray, do not spray on windy days.

If you have any questions regarding the health or care of your fruit trees, please call us!
